LMF / LMG RANGE RANGES OF CONNECTORS

'LMF' and 'LMG' Connectors have a medium to low density range of contact arrangements, using from 1 to 26 contacts, housed in a range of shell styles, within 3 shell sizes.

Shell Size 1.....Small
Shell Size 2.....Medium
Shell Size 3.....Large

Both ranges of connectors are suitable for use in exposed environments to the limits as detailed in specifications:

'LMF' to LMF/3/1
'LMG' to BB9522:F0014

There are two types within these connector ranges:

- a) Aluminium with fine thread coupling, suitable for light-weight use.**
- b) Brass with coarse thread coupling, suitable for more rugged applications.**

The '*LMF*' RANGE, formerly known as MK4, is the forerunner of these ranges, and has a temperature category of -40°C to +85°C, with a limited environmental capability. Additional to the standard range of shell styles are *Bulkhead Connectors* which will accept the full range of insert arrangements, and additional to insert arrangements are *Concentric Connectors* which are for single core high voltage applications.

The '*LMG*' RANGE, formerly MK7 (Patt.104), is an update on the LMF range and has a more comprehensive environmental performance. Standard inserts are polychloroprene and the temperature range is - 55°C to +100°C. For more demanding applications the fluorinated silicone rubber* may be selected for insulators and the temperature range extends to -55°C to +150°C.

'LMG' range does not include Bulkhead or Concentric style connectors.

Should the occasion demand, 'LMF' and 'LMG' connectors are intermateable within their respective styles and types. In this instance performance will be controlled by 'LMF' capability.

The full range of accessories outlined in the accessories section can be used on these connector ranges. Aluminium accessories can be used on brass connectors but in certain hostile environments, e.g. Mines and Petrochemical areas, the use of aluminium is undesirable, therefore, care must be taken when ordering.

* - High temperature version available to special order. Please contact Sales for more details.

HOW TO USE LMF / LMG CATALOGUES

The sealing efficiency of outlets used with LMF and LMG Plugs and Sockets is entirely dependent upon the selection of the correct sequence and size of outlet ancillary fittings applicable to a particular type and size of cable.

- 1. Select relevant plug or socket from catalogue range pages 14 - 33**
- 2. Refer to accessories catalogue pages 4 - 6 to select the correct accessory to suit shell & cable size of your connector.**
- 3. Recommended wiring methods see accessories catalogue pages 13 - 15**
- 4. Protective caps see accessories catalogue pages 7 – 9**

All contacts supplied with connectors are silver plated. To specify gold-plated contacts replace penultimate digit of connector part number with the figure 1. (e.g. /320 silver contacts /310 gold contacts)

DIMENSIONS

All dimensions with the exception of Imperial threads are in millimetres and are nominal. They are derived from original Imperial dimensions.

LMF RANGE ALUMINIUM AND BRASS CIRCULAR CONNECTORS

The LMF range consists of multi-contact circular connectors with fine and coarse thread couplings and non-removable solder contacts for d.c. and low-frequency applications. Configuration of contacts varies from 1 to 25. All fixed connectors are barrier and panel sealed. Free connectors are environmentally resistant.

Polarisation is effected by a single arrangement of housing (shell) keys and keyways with six different angular dispositions of the insert. These are designated 0, 1, 2, 3, 4 and 5. The polarisation availability for each connector is shown on the appropriate connector page. (Note: This is not applicable to concentrics).

Housing (shell) materials are aluminium alloy (with fine coupling threads) and brass (with coarse coupling threads).

The standard finish for aluminium is clean (natural/unplated) and the standard finish for brass is cadmium plate and passivate.

Accessories are available in aluminium alloy and brass. The standard finish is as for connectors.

Thermocouple connectors are available with alumel and chromel / brass and constantan contacts (part numbers on request).

The standard contact finish is silver plate.

LMF RANGE SHELL STYLES ALUMINIUM CONNECTORS WITH FINE THREAD

FREE UNIT A free plug or socket is wired to a cable as a means of connecting the cable to mating components. Outlet nuts are supplied with these items.			Mates with: Fixed unit Free coupler Bulkhead unit
FIXED UNIT A fixed plug or socket - for single hole mounting - with no facility for the use of cable fittings.			Mates with: Free unit
FIXED UNIT WITH OUTLET NUT A fixed plug or socket - single hole mounting with the facility for the use of cable fittings.			Mates with: Free unit
FREE COUPLER UNIT A free coupler plug or socket is wired to a cable as a means of connecting two free cables.			Mates with: Free unit
BULKHEAD CONNECTOR A climatic proof pressurised bulkhead connector is used to permit a complete break in a cable passing through a bulkhead. It has male contacts one end and female contacts the other. The bulkhead plug/socket has the plug moulding on the flange side of the bulkhead; the socket/plug has the socket moulding on the flange side of the bulkhead.			Mates with: Free unit

LMF RANGE SHELL STYLES BRASS CONNECTORS WITH COARSE THREAD

FREE UNIT A free plug or socket is wired to a cable as a means of connecting the cable to mating components. Outlet nuts are supplied with these items.			Mates with: Fixed unit Free coupler Bulkhead unit
FIXED UNIT A fixed plug or socket - for single hole mounting - with no facility for the use of cable fittings. Mates with free plug or socket only.			Mates with: Free unit
FIXED UNIT SQUARE FLANGE A fixed plug or socket - four corner hole mounting with the facility for the use of cable fittings.			Mates with: Free unit
FREE COUPLER UNIT A free coupler plug or socket is wired to a cable as a means of connecting two free cables.			Mates with: Free unit
BULKHEAD CONNECTOR A climatic proof pressurised bulkhead connector is used to permit a complete break in a cable passing through a bulkhead. It has male contacts one end and female contacts the other. The bulkhead plug/socket has the plug moulding on the flange side of the bulkhead; the socket/plug has the socket moulding on the flange side of the bulkhead.			Mates with: Free unit
BULKHEAD CONNECTOR FOR SINGLE HOLE MOUNTING * Special version of bulkhead connector with a single fixing hole, secured in place by a specially designed jam nut.			Mates with: Free unit

* - Available to special order

LMF RANGE MATING COMBINATIONS AND ORIENTATION

	Fixed Square Flange (Brass version only)		Free unit	
	Fixed Round Flange (with and without outlet nut)			
	Free coupler			
	Bulkhead unit			

All LMF connectors can be supplied with male and female contacts/mouldings and can be mated in combinations as shown above. The complete range of LMF Plugs and Sockets is catalogued on pages 8 to 25, and all units with the same contact arrangement are shown grouped together in order of number of contacts.

The diagram above each group shows the plug pin arrangement, the contact coding and moulding characteristics of the mating face of a plug. All coding of sockets is reversed, i.e. a mirror image of the plug coding

A feature of LMF plugs and sockets is that the internal moulding carrying the contacts may be located in any one of six radial positions relative to the major keyway in the outer shell (see diagrams at the side of each group, pages 14 to 32). This facility eliminates the possibility of mismating adjacent plugs and sockets of the same contact arrangement. The sixth position is known as 'neutral' (shown in all diagrams as orientation position 0). Unless otherwise stated when ordering, all plugs and sockets will be supplied in the neutral position. Orientated units are identified by replacing the last digit of the part number of the neutral unit with a position number. The last digit for neutral units is always 0. Only orientations of the same suffix number can be mated together.

Attention is drawn to the 3 contact 5 amp range of plugs and sockets in which only positions 0 and 5 are available as orientation variations.

LMF RANGE CHARACTERISTICS

ALUMINIUM VERSION (FINE THREAD) CONNECTORS

Temperature range	-40°to +85°C					
Maximum altitude	20,117 metres					
Number of Contacts	1, 2, 3, 4, 5, 6, 9, 12, 13, 18, 25					
Maximum current rating per individual contact at 70°C	5-60 amps dependent on contact size					
Contact finish	Silver plated (standard)					
Contact Solder	Rating	5 amp	12 amp	19 amp	35 amp	60 amp
Bucket	Inside dia.	1.50 mm	2.00 mm	2.75 mm	3.70 mm	5.00 mm
Working Voltage: DC or AC (Peak)	250 volts at sea level (normal contacts) 1500 and 2500 volts (high voltage contacts)					
Polarization	By housing (Shell) keys and keyways and by insert orientation					
Dielectric material	Plastic and Polychloroprene					
Dielectric construction	Sandwich					
Sealing	FREE CONNECTORS - Environmentally resistant FIXED CONNECTORS - Barrier and panel sealed. Max leakage 1 cc/hr at pressure differential of 1 Bar					
Housing material	Aluminium Alloy					

BRASS VERSION (COARSE THREAD) CONNECTORS

Temperature range	-40°to +85°C					
Maximum altitude	8474 metres					
Number of Contacts	1, 2, 3, 4, 5, 6, 9, 12, 13, 18, 25					
Maximum current rating per individual contact at 70°C	5-60 amps dependent on contact size					
Contact finish	Silver plated (standard)					
Contact Solder	Rating	5 amp	12 amp	19 amp	35 amp	60 amp
Bucket	Inside dia.	1.50 mm	2.00 mm	2.75 mm	3.70 mm	5.00 mm
Working Voltage: DC or AC (Peak)	250 volts at sea level (normal contacts) 1500 and 2500 volts (high voltage contacts)					
Polarization	By housing (Shell) keys and keyways and by insert orientation					
Dielectric material	Plastic and Polychloroprene					
Dielectric construction	Sandwich					
Sealing	FREE CONNECTORS - Environmentally resistant FIXED CONNECTORS - Barrier and panel sealed. Max leakage 1 cc/hr at pressure differential of 1 Bar					
Housing material	Brass					

APPLICATION – TYPICAL

Suitable for cable to panel connections in an exposed environment.

Aluminium, fine thread is for lightweight use.

Brass, coarse thread is used for heavy duty and in rugged conditions.

LMG RANGE ALUMINIUM AND BRASS CIRCULAR CONNECTORS

The LMG range consists of multi-contact circular connectors with fine and coarse thread couplings and non-removable solder contacts for d.c. and low-frequency applications. All fixed connectors are barrier and panel sealed. Free connectors are environmentally resistant.

Polarization is effected by a single arrangement of housing (shell) keys and keyways with six different angular dispositions of the insert; these are designated 0, 1, 2, 3, 4 and 5. The polarization availability for each connector is shown on the appropriate connector page.

Housing (shell) materials are aluminium alloy (with fine coupling threads) and brass (with coarse coupling threads.) The standard finish for both materials is drab olive chromate conversion over cadmium plate.

Accessories are available in aluminium alloy and brass. The standard finish for both materials is as for connectors.

The standard contact finish is silver plate.

LMG Range is manufactured in accordance with BS 9522 F0014.

LMG RANGE SHELL STYLES

ALUMINIUM CONNECTORS WITH FINE THREAD

FREE UNIT A free plug or socket is wired to a cable as a means of connecting the cable to mating components. Outlet nuts are supplied with these items.				Mates with: Fixed unit Free coupler
FIXED UNIT A fixed plug or socket - for single hole mounting - with no facility for the use of cable fittings. When these are required an outlet nut must be specified as an additional item.				Mates with: Free unit
FREE COUPLER UNIT A free coupler plug or socket is used as a means of connecting two free cables and mates with the free plug or socket only. Outlet nuts are supplied with these connectors.				Mates with: Free unit

LMG RANGE SHELL STYLES

BRASS CONNECTORS WITH COARSE THREAD

FREE UNIT A free plug or socket is wired to a cable as a means of connecting the cable to mating components. Outlet nuts are supplied with these items.				Mates with: Fixed unit Free coupler
FIXED UNIT (Round Flange) A fixed plug or socket - for single hole mounting - with no facility for the use of cable fittings. When these are required an outlet nut must be specified as an additional item.				Mates with: Free unit
FIXED UNIT (Square Flange) A fixed plug or socket - four corner hole mounting (available only in brass) - with the facility to accept cable fittings. When these are required an outlet nut must be specified as an additional item.				Mates with: Free unit
FREE COUPLER UNIT A free coupler plug or socket is used as a means of connecting two free cables and mates with the free plug or socket only. Outlet nuts are supplied with these connectors.				Mates with: Free unit

LMG RANGE MATING COMBINATIONS AND ORIENTATION

All LMG connectors can be supplied with male and female contacts/mouldings and can be mated in combinations as shown above. The complete range of LMG Plugs and Sockets is catalogued on pages 15 to 34, and all units with the same contact arrangement are shown grouped together in order of number of contacts.

The diagram above each group shows the plug pin arrangement, the contact coding and moulding characteristics of the mating face of a plug. All coding of sockets is reversed, i.e. a mirror image of the plug coding

A feature of LMG plugs and sockets is that the internal moulding carrying the contacts may be located in any one of six radial positions relative to the major keyway in the outer shell (see diagrams at the side of each group). This facility eliminates the possibility of mismatching adjacent plugs and sockets of the same contact arrangement. The sixth position is known as 'neutral' (shown in all diagrams as orientation position 0). Unless otherwise stated when ordering, all plugs and sockets will be supplied in the neutral position. Orientated units are identified by replacing the last digit of the part number of the neutral unit with a position number. The last digit for neutral units is always 0. Only orientations of the same suffix number can be mated together.

Attention is drawn to the 3 contact 5 amp range of plugs and sockets in which only positions 0 and 5 are available as orientation variations.

LMG RANGE CHARACTERISTICS

ALUMINIUM VERSION (FINE THREAD) CONNECTORS

Temperature range	-55°to +100°C (-55°to +150°C for high temperature version)*						
Maximum altitude	20,117 metres						
Number of Contacts	2, 3, 4, 5, 6, 9, 12, 13, 18, 25						
Maximum current rating per individual contact at 70°C	3-60 amps dependent on contact size						
Contact finish	Silver plated (standard)						
Contact Solder Bucket	Rating	3 amp	5 amp	12 amp	19 amp	35 amp	60 amp
	Inside dia.	1.05 mm	1.50 mm	2.00 mm	2.75 mm	3.70 mm	5.00 mm
Working Voltage: DC or AC (Peak)	500 volts at sea level (normal contacts) 1500 and 2500 volts (high voltage contacts)						
Polarization	By housing (Shell) keys and keyways and by insert orientation						
Dielectric material	Polychloroprene (Fluorosilicone rubber - high temperature version)*						
Dielectric construction	Monobloc						
Sealing	FREE CONNECTORS - Environmentally resistant FIXED CONNECTORS - Barrier and panel sealed. Max leakage 1 cc/hr at pressure differential of 1 Bar						
Housing material	Aluminium Alloy						

BRASS VERSION (COARSE THREAD) CONNECTORS

Temperature range	-55°to +100°C (-55°to +150°C for high temperature version)*						
Maximum altitude	8474 metres						
Number of Contacts	2, 3, 4, 5, 6, 9, 12, 13, 18, 25, 37						
Maximum current rating per individual contact at 70°C	3-60 amps dependent on contact size						
Contact finish	Silver plated (standard)						
Contact Solder Bucket	Rating	3 amp	5 amp	12 amp	19 amp	35 amp	60 amp
	Inside dia.	1.05 mm	1.50 mm	2.00 mm	2.75 mm	3.70 mm	5.00 mm
Working Voltage: DC or AC (Peak)	500 volts at sea level (normal contacts) 1500 and 2500 volts (high voltage contacts)						
Polarization	By housing (Shell) keys and keyways and by insert orientation						
Dielectric material	Polychloroprene (Fluorosilicone rubber - high temperature version)*						
Dielectric construction	Monobloc						
Sealing	FREE CONNECTORS - Environmentally resistant FIXED CONNECTORS - Barrier and panel sealed. Max leakage 1 cc/hr at pressure differential of 1 Bar						
Housing material	Brass						

* - High temperature version available to special order. Please contact Sales for more details.

APPLICATION – TYPICAL

Suitable for cable to panel connections in an exposed environment.
Aluminium, fine thread is for lightweight use.
Brass, coarse thread is used for heavy duty and in rugged conditions.

SPECIFICATION

LMG connectors (formerly MOD pattern 104) are manufactured in accordance with BS 9522 F0014.

LMF / LMG RANGE PRODUCT SAFETY INFORMATION

These notes are intended to be used in conjunction with the Product Catalogue and Product Specification. Products may be safely used in the applications for which they have been designed and within the specified rating and environments. If products are exposed to conditions outside the performance ratings or specified environments they may constitute a hazard. In particular it should be noted that:-

1. Material Content

Circular Connectors generally use metalwork parts made of brass, aluminium, phosphor-bronze or steel, which, dependant on the particular application, may be passivated and protected with cadmium or zinc plate – in conjunction with chromated or anodised surface finishes. The insulating materials can either be natural or synthetic rubber, together with plastic or glass-filled plastic moulded parts. Contact materials vary but are usually made of brass, phosphor-bronze, alumel or chromel.

2. Electric Shock, Burns and Fire

Hazard can occur if the product is used outside the specified parameters or if the product is damaged, wrongly wired, poorly assembled, poorly integrated into larger equipments, or contaminated with conductive fluids. Live circuit terminations must be protected and live circuits never broken by disconnecting products.

Hot spots may be created when resistance is increased due to damage or incorrect integration particularly soldering, or loose terminations. Overheating can cause breakdown of insulation, electric shock, burns or, ultimately, fire. In the event of fire noxious and/or toxic fumes may be released and, in these circumstances, any fire involving the product should be dealt with by personnel properly equipped. Connectors with exposed terminations or contacts should not be used on the current supply side of a circuit with exposed contacts on an unmated product. Before making a circuit live, the product and wiring should be checked to ensure there is no electrically conducting debris present. Circuit resistance checks should also be conducted before making the circuit live. Always ensure that connectors are assembled and wired by properly trained personnel.

3. Use, Transport and Storage of Products

Care must be exercised to avoid damage to any part of the products during transporting, storage or use. Abnormal transit or storage conditions and abuse during installation can give rise to damage. Products should not be used in a damaged condition.

Improper storage (particularly of damaged products) can give rise to additional hazards particularly corrosion. Attention is specifically drawn to the need for proper storage of products containing cadmium and you are advised to see the Guidance Note from the Health and safety Executive on Cadmium – Health and Safety Precautions.

4. Disposal of Products

Product should not be burnt.

SAFETY RULES

1. FOLLOW THE GUIDELINES GIVEN.
2. ALWAYS PROTECT LIVE CIRCUITS AND NEVER DISCONNECT A LIVE CONNECTOR.
3. NEVER USE A DAMAGED CONNECTOR.
4. NEVER BURN DISCARDED CONNECTORS.
